REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

While it is known in the art to provide a centrifugal separator which comprises a screw conveyor inside of a bowl, wherein the separator supports the conveyor and bowl such that the conveyor and bowl are relatively rotatable, separates the object to be treated from a feed stock supplied to the inside of said bowl, and carries out cleaning and deliquidization of said object to be treated with a screen part provided along the inner circumferential surface at one end of the bowl, a hub of said screw conveyor having a cleaning liquid receiving part for receiving the cleaning liquid supplied to the inside of the hub and a cleaning nozzle which jet spouts the cleaning liquid from the inside of the cleaning liquid receiving part toward said screen part, wherein a liquid conduction part for jet spouting at least a part of the cleaning liquid directly toward the residual layer crystals formed in the clearance between the outer circumferential edge of the flight of said screw conveyor and the inner circumferential surface of said screen part is provided (see, for example, JP 10-28899 to Hibi et al.), in the examiner's opinion, the prior art fails to teach or fairly suggest the separator further comprising the tip of at least a part of the cleaning liquid conduction part is located within 10 mm from the inner surface of the screen part or the a residual layer crystal cleaning liquid receiving part and having the recited positioning and operational elements relative to the recited screw conveyor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
